Project Name	Comic Craft AI
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure your code is well-structured, commented, and follows best practices for your chosen technology stack.
2. The solution should address the core problem statement and implement the key functional requirements.
3. Include all source files, configuration files, and setup instructions needed to run the application.
4. Attach or link to your code repository (e.g., GitHub) in the table below.

Solution Summary

Field	Details
Repository Link / URL	<a href="https://github.com/<your-username>/comic-craft-ai">https://github.com/<your-username>/comic-craft-ai (replace with your actual repository link)
Programming Language(s)	JavaScript (frontend and backend), Python (AI service)
Framework(s) Used	React, Tailwind CSS, Node.js with Express.js, Flask (AI service); PostgreSQL and MongoDB for data storage
Key Features Implemented	• User registration and login (email/password and Gmail) with JWT authentication • AI comic script generation from a story idea or prompt • Art style and character selection • AI comic panel image generation from the script • Speech bubble and caption editor for each panel • My Library to save, rename and delete comics • Export as PDF / image and share via link
Pending / Incomplete Features	Facebook login (USN-3, low priority); further performance tuning of AI image generation.
Setup / Run Instructions	1. Clone the repository and open the project folder. 2. Backend: <code>cd backend, npm install, create a .env file (database URL, JWT secret, AI API key), then npm start.</code> 3. AI service: <code>cd ai-service, pip install -r requirements.txt, then python app.py.</code> 4. Frontend: <code>cd frontend, npm install, then npm run dev.</code> 5. Open <code>http://localhost:5173</code> in the browser.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

Comic Craft AI lets users turn a story idea into a complete comic using AI. The project follows a layered architecture (React client, Express API gateway, and separate Auth, Core Logic and AI services). Registration, login, comic generation, editing, library and export are implemented; Facebook login is the only pending item.
