

Project Initialization and Planning Phase

Date	15 March 2024
Team ID	6aba25588343c5cff063937b
Project Title	Comic Craft AI - AI-Powered Comic Generation from Story Scripts
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

The proposal report aims to transform comic creation using AI, helping people with no drawing skills turn story scripts into illustrated comics quickly and affordably. It tackles the high cost, time and skill that comic art needs. Key features include AI storyboard and panel generation, consistent characters and automatic layout.

Project Overview	
Objective	The primary objective is to help users turn story scripts into fully illustrated comics using AI, making comic creation faster, cheaper and possible without drawing skills.
Scope	The project covers script-to-storyboard generation, consistent characters, automatic panel layout and speech bubbles, art style selection, editing, and PDF/PNG export and sharing.
Problem Statement	
Description	Creators, teachers and hobby writers have story ideas but lack drawing skills or the budget to hire artists, and existing AI tools give inconsistent characters.
Impact	Solving this lets more people create and share comics quickly at low cost, saving time and money and encouraging creativity and learning.
Proposed Solution	
Approach	Using generative AI to build a storyboard from the script, create consistent character panels, place speech bubbles automatically and let users edit and export the comic.
Key Features	- AI storyboard and panel generation from a script. - Consistent characters across every panel.

	- Automatic panel layout, speech bubbles and art styles. - Editing, PDF/PNG export and multilingual sharing.

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	CPU/GPU specifications, number of cores	4 vCPU cloud server (AWS EC2)
Memory	RAM specifications	16 GB
Storage	Disk space for data, models, and logs	500 GB SSD, plus AWS S3 for images
Software		
Frameworks	Web frameworks	React.js, FastAPI
Libraries	Additional libraries	Pillow, requests, pydantic, Tailwind CSS
Development Environment	IDE	VS Code, Jupyter Notebook
Data		
Data	Source, size, format	Story scripts (JSON) and generated images (PNG)
